Premier Surgeon announces the PS250 list of leading innovators in the field of premium IOL implant surgery. Premier Surgeon announces and welcomes the PS250 to the Premier Surgeon community. PS250 is a list of 250 surgeons the publisher and editors of Premier Surgeon have identified as leading innovators in the field of premium IOL implant surgery. The PS250 will be published annually in Premier Surgeon, with special events and offers for members announced throughout the year.

"The PS250 is a list that the editors developed to help frame the premium IOL movement. We wanted to know who are the movers and shakers of premium IOL surgery," said Joan-Marie Stiglich, ELS, Senior Vice President of SLACK Incorporated.

The editors of Premier Surgeon researched and compiled a list of surgeons they knew were: educating their colleagues about premium IOLs at ophthalmic meetings; conducting research to optimize patient clinical outcomes; digging into the diagnostic technology to assist in selecting the best patient, and the best lens for that patient; looking into the unique business aspects of premium IOL surgery; and were the early adopters of the IOL technology.

"This is the first step towards an exciting year for Premier Surgeon, and we look forward to working with the members of the PS250 and building a strong publication and community," Stiglich added.

In January 2011, Brad S. Elkins M.D. was included on this prestigious list of surgeons.
